

Como mudar a senha do meu postgres?

Montei esse passo a passo para aqueles que já tem o postgres instalado no pc, mas por algum motivo esqueceram/ não sabem a senha.

1. Localizar o arquivo “pg_hba.conf”

Geralmente fica em *C:\Arquivo de Programas\PostgreSQL<nº_versão>\data\pg_hba.conf*

Abrir com o BLOCO DE NOTAS => Modificar. **IMPORTANTE:** Guarde esse valor inicial, porque no fim, vamos colocar ele de volta.

De:

#	TYPE	DATABASE	USER	ADDRESS	METHOD
# "local" is for Unix domain socket connections only					
local	all		all		scram-sha-256
# IPv4 local connections:					
host	all		all	127.0.0.1/32	scram-sha-256
# IPv6 local connections:					
host	all		all	:::1/128	scram-sha-256
# Allow replication connections from localhost, by a user with the					
# replication privilege.					
local	replication		all		scram-sha-256
host	replication		all	127.0.0.1/32	scram-sha-256
host	replication		all	:::1/128	scram-sha-256

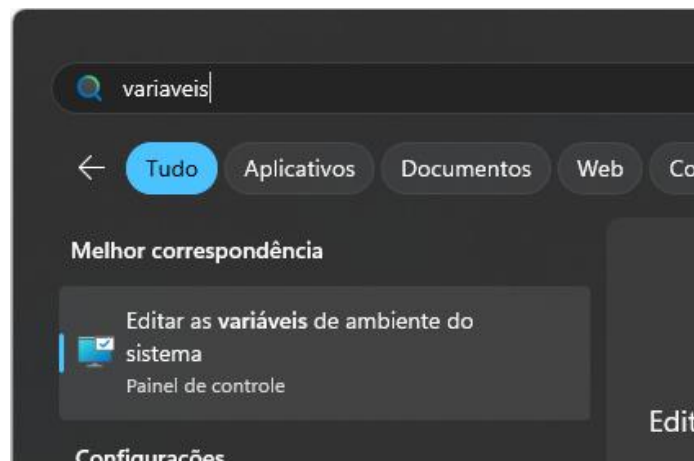

Para:

#	TYPE	DATABASE	USER	ADDRESS	METHOD
# "local" is for Unix domain socket connections only					
local	all		all		trust
# IPv4 local connections:					
host	all		all	127.0.0.1/32	trust
# IPv6 local connections:					
host	all		all	:::1/128	trust
# Allow replication connections from localhost, by a user with the					
# replication privilege.					
local	replication		all		trust
host	replication		all	127.0.0.1/32	trust
host	replication		all	:::1/128	trust

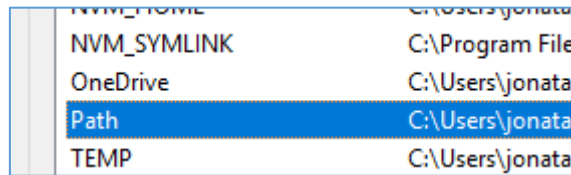

2. Atualizar as Variáveis de ambiente

Copie seu caminho *C:\Arquivo de Programas\PostgreSQL<nº_versão>\bin*

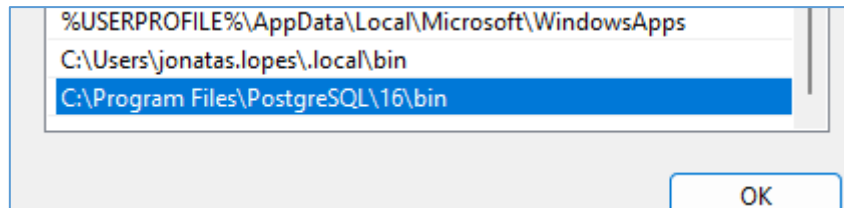

Busque pelas variáveis de ambiente:

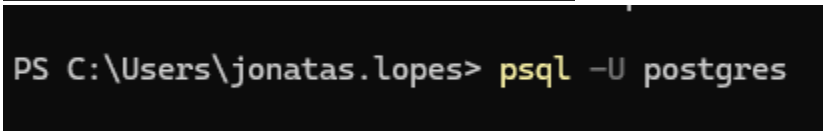

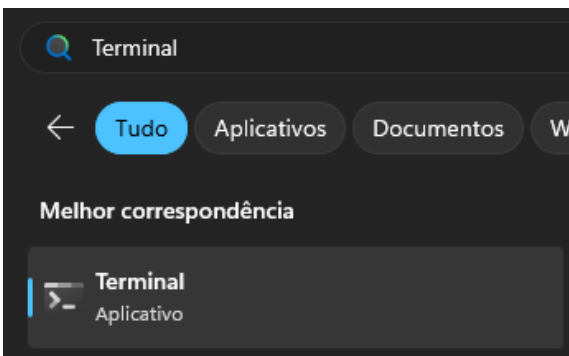

Clique 2 vezes em “Path”:

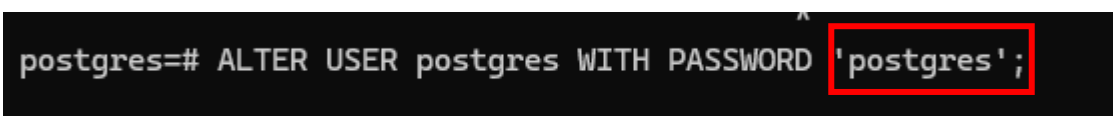

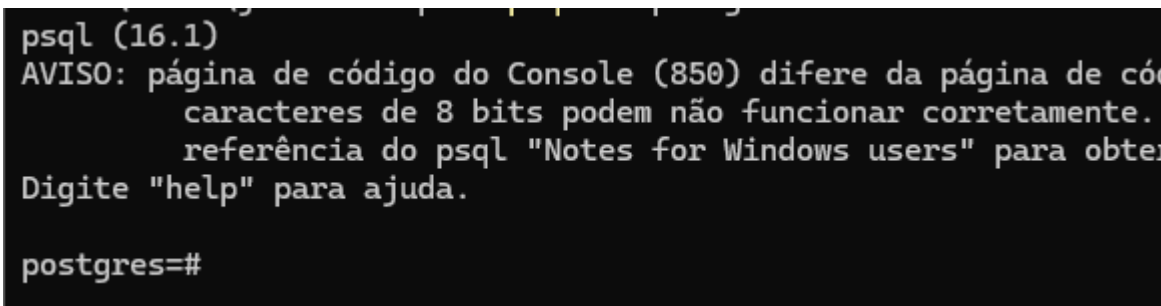

Adicione o caminho nas variáveis e clique OK:

3. Acesse o Terminal do PC e digite:

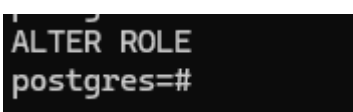

<- acessa o postgres

<-altera senha

pra ‘postgres’

<-alterado com sucesso, pode fechar o Terminal

IMPORTANTE: volte para o arquivo do passo 1 e volte a colocar os valores iniciais.
(segurança)
